Mattia F. Palermo, MSc in Industrial Chemistry, earned his Ph.D. in Computational Chemistry at the Department of Industrial Chemistry, University of Bologna, with a thesis on the modeling of liquid crystals through means of molecular dynamics simulations. After a post-doc at the same department, in 2017 he moved to the industry as an R&D Researcher in the field of industrial coatings at Sherwin-Williams. In 2021, he joined Green Energy Storage as Senior Scientist to work on the discovery and design of new electrolyte chemistries for redox flow batteries through computational chemistry techniques.
