

Fluoro-free water repellent finish: properties and compliance with environmental standards

Claudio COLLEONI, ArgoChem Srl

In this speech the results of the I-TEX project will be presented. The goal of the project is a sustainable and innovative water repellent textile finish, which combines excellent water repellency performance and high wash resistance while retaining the fabric's inherent breathability and no impact on fabric's appearance, handfeel and overall comfort. The compliance with environmental standards will be discussed.
