

## **Joint Programme AMPEA (Advanced Material and Processes for Energy Applications)**

*Sawako Nakamae, EERA-AMPEA*

The EERA (European Energy Research Alliance) joint program AMPEA aims to foster a truly multi-disciplinary approach to bring basic science into generating the breakthrough concepts and tools for future emerging energy technologies leading to the long-term competitiveness of European Industry. In this presentation, we will introduce AMPEA's activities for harnessing collaborative research and bridging the gap between materials science innovation, followed by one example case of public research group's successful navigation through the 'discovery-to-market innovation value chain as described below.
