

The GaN4AP project overview and objectives

*Leoluca LIGGIO, Coordinator of the European Project "GaN4AP" & Distretto Tecnologico Sicilia
Micro e Nano Sistemi*

In this presentation the Distretto Tecnologico Sicilia Micro e Nano Sistemi will show how the Consortium is involved in projects that aim to address three of the EU's main challenges today: energy consumption, sustainability and smart mobility. They will show how micro-nanotechnologies can help with reference to the development of new components and systems based on WBG technology in SiC and GaN, and in particular the GaN4AP project (an European project, coordinated by the *Distretto*, launched last June 2021 with the participation of 36 partners of 6 Countries).
