

Meganne Christian is a Research Fellow at the Institute for Microelectronics and Microsystems of the National Research Council of Italy. As part of the European Commission's Graphene Flagship, her work focuses on the development of 3D graphene materials for broad-ranging applications from energy storage to aerospace. She has performed two scientific expeditions to Concordia Station in Antarctica (November 2018 to November 2019 and November 2020 to January 2021). She received her PhD in Industrial Chemistry from the University of New South Wales, Australia, in 2014.
