

Prof. **Paolo Ciana**, head of Molecular Pharmacology and Cancer Biology Lab (MPCBL), is Professor of Biotechnology and Pharmacology, School of Medicine and Surgery, Department of Health Sciences (DiSS), University of Milan. He received his master's degree in Biological Sciences, University of Pavia, the Ph.D. in Experimental Hematology, University of Milan, and spent three-years as a postdoc at the EMBL, Heidelberg, Germany. He is author of 126 publications including articles, book chapters and patents. His research has been focused on gene transcription as an innovative pharmacological target for the prevention and the cure of cancer and neurodegenerative diseases. Recently he developed autologous extracellular vesicles as a drug delivery system, thus introducing the concept of "personalized nanotherapy".
