

Francesca De Giorgio is researcher at the National Research Council (CNR) - Institute for the Study of Nanostructured Materials (ISMN) in Bologna since September 2020. She graduated in Photochemistry and Material Chemistry in 2010 at the University of Bologna where she obtained the doctorate in Chemistry in 2016 under the supervision of Prof. Marina Mastragostino and Prof. Catia Arbizzani of the Laboratory of Electrochemistry of Materials for Energy (LEME, Department of Chemistry "Giacomo Ciamician"). Since 2009 she has been working in the field of electrochemical energy storage and conversion systems, i.e., high-energy lithium-ion and next generation lithium batteries for stationary applications and electric mobility. She collaborates with MISTER Smart Innovation; in 2018 she co-founded the Italian Startup BETTERY Srl - Spin-off of the University of Bologna and she was President and Legal Representative from January 2018 to March 2020; in 2019 she collaborated as Associate Battery Researcher at Manz Italy Srl.
