

Gian Carlo Gazzadi is a technologist at the Nanoscience Institute of CNR in Modena, where he coordinates the Nanofabrication Laboratory. He has a strong expertise in the application of dual beam instruments – focused ion beam (FIB) and scanning electron microscope (SEM) – to nanofabrication and analysis of materials. Along with research, a relevant part of his activity has been also devoted to commercial contracts with industry. He is author of more than 100 scientific publications and member of the scientific committee of the International Focused Electron Beam Induced Processing (FEBIP) Workshop.
