

**Damiano Genovese** (PhD in Chemistry, University of Bologna, 2011) received two grants for research stays in Ecole Normale Supérieure (France, 2007) and in Harvard University (USA, 2009). He was then awarded the ENI prize for his “Debut in Research” (2013). He was an Alexander von Humboldt Fellow (Karlsruhe Institute of Technology, Germany, with prof. Luisa De Cola, 2013-2015) and he is now in a tenure-track for associate professorship (RTD-b) in Chemistry at the Department of Chemistry “G. Ciamician”, Università di Bologna (2019-2022). His research spans interdisciplinary fields such as colloids physics and surface chemistry, self-assembling systems, and nanostructured photoactive materials for optoelectronics, sensing, and nanomedicine.
