

**Gustavo Gonzalez** holds a Ph.D. and master's degree in Materials Science and technology, both from the Polytechnic of Turin. His research activities have been focused on developing and testing new polymeric materials and composites for producing functional devices through 3D printing. In particular, during the last years, he focused on developing polymeric microfluidic devices and microfluidic multiwells using light-based 3D printing methods. Gustavo Gonzalez joined the Italian Association for Industrial Research (AIRI) in 2021 as a technology analyst focusing on analyzing the socio-economic and ethical impact of new and emerging technologies and disseminating technical-scientific information to citizens, policymakers, and other industrial actors. His current interests are technology assessment, innovation management, technological transfer, and multi-stakeholder dialogues on emerging and enabling technologies.
