

Dr. Nadhira Bensaada Laidani, Senior Researcher at FBK. She received her PhD in Applied Chemistry (Plasma chemistry) from Pierre & Marie Curie University (Paris, 1988). She has been employed since 1991 at FBK (former ITC). Her expertise includes plasma processes, thin film growth by physical vapor deposition and atomic layer deposition, surface functionalization by plasma and characterization of thin films and surfaces. Her recent research interests cover materials science for energy applications (oxide-based photon converters for photovoltaics, selective solar absorbers, materials for transparent electrodes, gas permeation films, protective coatings, graphene decoration by PVD and ALD routes).
