

Siavash Maraghechi is a post-doctoral researcher in the Chair of Applied Mechanics at Eindhoven University of Technology (TU/e). He obtained his PhD in the mechanical engineering department in TU/e where he focused on microscopy techniques and full field methods for deformation measurements in complex materials. His research interest is in the field of multiscale experimental mechanics, that he is currently applying to study degradation of historical paper as a part of ColletionCare project, that aims to develop an innovative preventive conservation decision support system for museums and collections.
