

Graziano Martello is an Associate Professor of Molecular Biology at the Department of Biology, University of Padua. GM's main field of research is the study of pluripotent stem cells and their use for dissecting human diseases. The Martello laboratory utilizes culture, generation and genetic modification of pluripotent stem cells, bioinformatics analyses of multi-omic data and computational modelling. GM is a member of the steering committee of the *The Italian Society of Biophysics and Molecular Biology (SIBBM)*. GM routinely serves as a referee for Nature, Nature Cell Biology, Nature Communications, The EMBO Journal and for international granting agencies.
