

Dalila Miele, a postdoctoral fellow at the biopharmaceutical and pharmaceutical development laboratory (Bfordev lab) of the Department of Drug Sciences, University of Pavia (supervisor: Prof. Giuseppina Sandri). She holds a Ph.D. in Chemical and Pharmaceutical Sciences accomplished at the same university in February 2020. The Ph.D. project was focused on the design of nanoparticles and nanofibers as drug delivery systems of poorly soluble drugs (supervisor: Prof. Maria Cristina Bonferoni). She is now involved in Italian and European-funded projects (U4i and H2020) and follows the institutional research regarding the development of micro and nano scaffolds envisaged as skin or tendon substitutes.
