

Marco Pugliese is an R&D Engineer at Klopman International, working on the integration of organic optoelectronic devices on textile substrate. He graduated in Telecommunication Engineering at the University of Salento (Lecce, Italy) on the development of microfabrication processes for Surface Acoustic Wave filters. Therefore, he moved on to the study and design of optoelectronic devices, including organic light emitting diodes (OLEDs), chromogenic and photovoltaic devices. He is currently involved in the design and the integration of OLEDs on alternative and unconventional substrates such as flexible plastics and fabrics, using low-cost processing techniques.
