

Vincenzo Spallina is a Senior Lecturer in the Department of Chemical Engineering and Analytical Science at the University of Manchester. He was awarded a PhD cum laude on Energy and Nuclear Science and Technology at Politecnico of Milano in 2013 in the group of energy conversion system (GECoS) and worked 4 years as postdoc research associate at the Eindhoven University of Technology in the group of Chemical Process Intensification (SPI). Prior to join the University of Manchester in January 2018, he was also researcher for 6 months in the group of Membrane Technology in Tecnia research centre. His expertise spans from high temperature fuel cells, membrane/membrane reactor and gas-solid technologies. His research combines experimental activity, modelling and technology assessment for low carbon energy, biofuel and CCUS. He is currently the project coordinator and principal investigator of an EU-H2020 project on negative emissions aviation biofuels ([H2020 GLAMOUR](#)), principal investigator of an EPSRC project ([BREIN-STORM, EP/S030654/1](#)) and project partners in a H2020 project ([H2020 C4U](#)) on steel decarbonisation using advanced solid processes, Co-Investigator of an EPSRC ([SPACING EP/V026089/1](#)) on green production of acrylic acid and new system form air purification in aircraft applications [INNOVATE UK \(code 113237\)](#).
