

**Stefano Tacconi**, after graduating in 2016, has carried out research in Biochemistry and Molecular Biology in the field of mitochondrial function in hepatic steatosis. In 2017 he began his PhD research at the Laboratory of Comparative Anatomy and Cytology of the Department of Biological and Environmental Sciences (Di.S.Te.B.A.) of University of Salento in the field of extracellular vesicles, metabolic alterations and immune function. He currently works as a Post Doc at the University of Salento, dealing with the development of nano-formulated pesticides for the treatment of plant diseases. In addition, he has a great research interest in extracellular vesicles in metabolic, neurodegenerative and cancer diseases, immunity, nano-formulated systems and their therapeutic use and toxicology.
